“Johnny Applesauce”

John Chapman, or better known as Johnny Appleseed, is many times celebrated in March since that is apple tree planting season and that is what he is historically known for! While apples are a tasty fruit to crunch into, some people prefer the smoother texture of applesauce. You and your child can easily make some homemade applesauce to enjoy together! First, peel, core, and chop about 4 apples. Let your child help you as much as possible in this step. Then, place the chopped apples in a medium sauce pan with $\frac{3}{4}$ cup of water, $\frac{1}{3}$ cup of sugar and $\frac{1}{2}$ teaspoon of cinnamon. Bring to a boil and then reduce to a simmer, cover, and let cook for about 20 minutes. Move this mixture to a blender or use a handheld one, and blend until smooth. This delicious applesauce can be served warm or cold.

Rainbow Sensory Bottles

The month of March is all about leprechauns, pots of gold, and rainbows! Help your child create their own sensory bottles using all the colors of a rainbow! You will need a few water bottles with their labels torn off, liquid food coloring, baby oil, and water! Using a funnel, help your child fill each bottle about 1/3 full of water. Then, add in a few drops of different colors of food coloring and fill the rest of the bottle with baby oil. Before securing the lids, your child may like to pour in glitter to each bottle to make the colors sparkle. Finally, secure the lids on each bottle with either hot glue or electric tape. Have your child place the bottles on a window ledge where the sun can shine on all of the colors of the rainbow. Of course, they can pick them up at any time and give them a good shake to watch the glitter move through the liquid. This is a great activity to learn colors and to see how water and baby oil interact in the bottles!
