

Winter Blizzard

Help your child experience a winter blizzard in a glass! In a small bowl, mix 1 tablespoon of white paint with a cup of water. Next, pour baby oil into a glass until it is about $\frac{1}{2}$ full. Then, pour the white water into the oil. Finally, break an Alka-Seltzer tablet into 4 pieces. Let your children take one of the pieces and drop it into the glass. The white water will start to bubble up to the top of the glass and then drop back down over and over again! The more tablets they drop in, they more bubbles will be made!
